They include: (1) provides a record of water use, (2) enables the State to determine if additional water is available for future appropriations, and (3) assists the State to determine if additional water is available for future appropriations.

Appropriations. The filing of a statement (1) provides a record of water use, (2) enables the State to notify such users if some one proposes a new appropriation exceptions. An appropriate division and use must be filed by riparian and pre-1914 appropriative water users as set forth in Water Code section 5100 with specific

Appropriative rights can be granted to riparian water users. Since 1914, new appropriators have been required to obtain a permit and license from the State. An appropriate right is required for use of water on non-riparian land and for storage of water. Generally, appropriative rights may be exercised only when there is a surplus not needed by riparian water users. There is a natural stream system.

A riparian right enables an owner of land bordering a natural lake or stream to take and use water on his riparian land. Riparian land must be in the same watershed as the water source and must never have been severed from the sources of supply by an intervening parcel without reservation of the riparian right to serve the water user later for later use or to divert water which originates in a different watershed, water previously stored by others, return of a stream but may not be used to store water or to divert water which originates in a different watershed, water natural flow of a stream or groundwater, or other "foreign" water to the natural stream system.

There are two principal types of surface water rights in California. They are riparian and appropriative rights.

Statement of Water Division and Use

Statement of Water Division and Use must be filed by riparian and pre-1914 appropriative water users. The filing of a statement (1) provides a record of water appropriated from their stream, and (3) assists the State to determine if additional use, (2) enables the State to notify such users if someone proposes a new appropriation use, (2) enables the State to notify such users if someone proposes a new appropriation upstream from their diversion, and (3) assists the State to determine if additional use is available for future appropriators.
